**Notes to table:**

**Foundation courses**

These courses are taught to first or second year students. They can be adapted to higher level students, only if these students have never been exposed to the subject. For example, the course in European Economy may be adapted to Master level students if they have never had an introduction to the subject before.

**Intermediate courses**

These courses are taught to third year students or to students attending the first year of a Master's degree. All these courses would be suitable for Master's degree students if they have validated a foundation course in the related subject (for example, the course in US and International Accounting would require, preferably, that students have had a foundation course in accounting before).

**Advanced courses**

These courses are taught to students attending the second year of a Master's degree. All these courses would be suitable for Master's degree students.

**Number of European credits (ECTS)**

The number of European Credits depends both on the number of hours and the amount of personal work requested from the students. However, since rules vary a lot, depending on the University and the speciality of the students, in a non-European context, the number of credits linked to a course can be tailored to the country of origin of the exchange student.
